No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 3 Sequence 3 Sequence 4 Sequence 5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

US-10-153-064-133

Sequence 133, Application US/10153064

Patent No. 6663485

GENERAL INFORMATION:
APPLICANT: Bell t al.
ITILE OF INVENTION: Chemokine Beta-1 Fusion Proteins
FILE REFERENCE: FF556

CURRENT APPLICATION NUMBER: US/10/153,064

CURRENT FILING DATE: 2002-05-24

PRIOR FILING DATE: 2001-05-25

NUMBER OF SEQ ID NOS: 137

SOFTWARE: Patentin version 3.1

LENGTH: 651
SEQUENCE CHARACTERISTICS:
LENGTH: 610 amino acids
TYPE: amino acid
TYPE: amino acid
TOPOLOGY: linear
MOLECULE TYPE: protein
SEQUENCE DESCRIPTION: SEQ ID NO: 2:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A, Experimental source: liver
C, Comment: This protein is the major protein component in plasma. It functions as a mult
ein has 35 conserved cysteine residues.
C, Superfamily: serum albumin; serum albumin repeat homology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A)Status: preliminary

```
-!- SUBSULTY: SEEMS TO FORM HETERODIMER WITH KIRS.1/KCNJ16 (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the inward rectifier-type potassium channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                              TISSUE=Cerebellum;
Schoots O., van Tol H.H.M.;
Submitted (SEP-1996) to the EMBL/GenBank/DDBJ databases.
Submitted (SEP-1996) to the EMBL FOR POTASIUM BUFFERING ACTION OF
-!-FUNCTION: MAY BE RESPONSIBLE FOR POTASIUM BUFFERING ACTION OF
-!-FUNCTION: ECELL RATHER THAN OUT OF ILL WPOTASIUM FOR FORM FOR INTO THE CELL RATHER THAN OUT OF IT. THEIR VOLITAGE DEPENDANCE IS
REGULATED BY THE CONCENTRATION OF EXTRACELLULAR POTASSIUM: AS
EXTERNAL K(+) IS RAISED, THE VOLTAGE RANGE OF THE CHANNEL OPENING
SHIFTS TO MORE POSITIVE VOLTAGES. THE INWARD RECTIFICATION IS
MAINLY DUE TO THE BLOCKAGE OF OUTWARD CURRENT BY INTERNAL
MAGNESIUM. CAN BE BLOCKED BY EXTRACELLULAR BA(2+) AND CS(+) (BY
                                                                                                                                                                                                                                                                                                                                                                             "Cloning and characterization of two K+ inward rectifier (Kir) 1.1 potassium channel homologs from human kidney (Kirl.2 and Kirl.3)."; J. Biol. Chem. 272:586-593(1997).

Glia 33:57-71 (2001).

-1. FUNCTION: MAY BE RESPONSIBLE FOR POTASSIUM BUFFERING ACTION OF GLIAL CELLS IN THE BRAIN. INWARD RECTIFIER K(+) CHANNELS ARE CHARACTERIZED BY A GREATER TENDANCY TO ALLOW POTASSIUM TO FLOW INTO THE CELL RATHER THAN ONT OF IT. THEIR VOLTAGE DEPENDANCE IS REGULATED BY THE CONCENTRATION OF EXTRACELLULAR POTASSIUM; AS EXTERNAL K(+) IS RAISED, THE VOLTAGE RANGE OF THE CHANNEL OPENING SHIFTS TO MORE POSITIVE VOLTAGES. THE INWARD RECTIFICATION IS MAINLY DUE TO THE BLOCKAGE OF COUTWARD CURRENT BY INTERNAL MAGNESIUM. CAN BE BLOCKED BY EXTRACELULAR BA (2+) AND CS(+) (BY SIMILARITY).
                                                                                                                                                                  MI (POTENTIAL).

I. Proc. Natl. Acad. Sci. U.S.A. 92:6753-6757(1995)

C. I- FUNCTION: MAY BE RESPONSIBLE FOR POTASSIUM BUFFERING ACTION OF GLIAL CELLS IN THE BRAIN. INWARD RECTIFIER K(+) CHANNELS ARE CHARACTERIZED BY A GREATER TENDANCY TO ALLOW POTASSIUM TO FLOW INTO THE CELL RATHER THAN OUT OF IT. THEIR VOLTAGE DEPENDANCE IS REGULATED BY THE CONCENTRATION OF EXTRACELLULAR POTASSIUM; AS EXTERNAL K(+) IS RAISED, THE VOLTAGE RANGE OF THE CHANNEL OPENING SHIFTS TO MORE POSITIVE VOLTAGES. THE INWARD RECTIFICATION IS MAINLY DUE TO THE BLOCKAGE OF OUTWARD CURRENT BY INTERNAL MAGNESIUM. CAN BE BLOCKAGE OF OUTWARD CURRENT BY INTERNAL MAGNESIUM. CAN BE BLOCKAGE OF OUTWARD CURRENT BY INTERNAL.

- SUBUNIT. SERMS TO FORM HETERODIMER WITH KIRS.1/KCNJ16.

- SUBUNIT. SERMS TO FORM HETERODIMER WITH KIRS.1/KCNJ16.

- TISSUE SPECIFICITY: Predominantly in glial cells of the cerebellum and forebrain. Expressed to a lesser extent in the kidney, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This SWISS-PROT entry is copyright. T. T.X. and primary structure of horse serum albumin (Equus caballus)

at 0.27-nm resolution...;

at 0.27-nm resolution...;

L. Strochem. 215:205-212 (1993).

-1. FUNCTION: Serum albumin, the main protein of plasma, has a good hormones, bilitubin and drugs. Its main function is the regulation of the colloidal osmotic pressure of blood.

-1. FUNCTIONES SPECIFICITY: Secreted.

-1. TISSUBE SPECIFICITY: Plasma.

-1. TISSUBE SPECIFICITY: Plasma.

-1. SUMILARITY: Belongs to the ALB/AFF/VDB family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

Fed. Proc. 33:189-189(1974).
-!- Proc. 33:1889-189(1974).
-!- PUNCTION: Serum albumin, the main protein of plasma, has a good binding capacity for water, Ca(2+), Na(+), K(+), fatty acids, hormones, bilirubin and drugs. Its main function is the regulation of the colloidal osmotic pressure of blood.
-!- SUBCELLULAR LOCATION: Secreted.
-!- ALLERGEN: Causes an allergic reaction in human.
-!- SIMILARITY: Canes an allergic reaction in human.
-!- SIMILARITY: Contains 3 albumin domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDINE=88267456; PubMed=3389500;

Brown W.M., Dziegielewska K.M., Foreman R.C., Saunders N.R.;
"Nucleotide and deduced amino acid sequence of sheep serum albumin.";
Nucleotide Acids Res. 17.10499-10455(1989).

1. FUNCTION: Serum albumin, the main protein of plasma, has a good
binding capacity for water, Ca(2+), Na(+), K(+), fatty acids,
hormones, bilitubin and drugs. Its main function is the regulation
of the colloidal osmocito pressure of blood.

1. SIBCELLUIAR LOCATION: Secreted.
1. SINILARITY: Belongs to the ALB/AFP/VDB family.
1. SIMILARITY: Contains 3 albymin domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

Molecular characterization of dog albumin as a cross-reactive

T allergen...;

J Allergy Clin. Immunol. 93:614-627(1994).

-: FUNCTION: Serum albumin, the main protein of plasma, has a good binding capacity for water, Ca(2+), Na(+), K(+), fatty acids, Corrence, binding capacity for water, Ca(2+), Na(+), K(+), fatty acids, binding capacity for water, Ca(2+), Na(+), K(+), fatty acids, containes, bilitubin and drugs. Its main function is the regulation of the colloidal osmocic pressure of blood.

-: SUBCELLULAR LOCATION: Secreted.

-: SUBCELLULAR LOCATION: Secreted.

-: SUBCELLULAR Causes an allergic reaction in human.

-: Allergen:
-: SIMILARITY: Contains 3 albumin domains.

STRAIN=New Zealand white, TISSUE=Liver;
STRAIN=New Zealand white, TISSUE=Liver;
Sheffiteld W.P., Syed S., Schuyler P.D.;
Submitted (DEC-1994) to the EMBL/GenBank/DDBJ databases.

-I- FUNCTION: Serum albumin, the main protein of plasma, has a good binding capacity for water, Ca(2+), Na(+), K(+), fatty acids, hormones, bilirubin action from ain function is the regulation of the colloidal osmotic pressure of blood.

-I- SUBCELLULAR LOCATION: Secreted.
-I- TISSUE SPECIFICITY: Plasma.
-I- SIMILARITY: Belongs to the ALB/AFP/VDB family.
      Oryctolagus cuniculus (Rabbit).
Bukaryota, Metazoa, Chordaca, Craniata, Vertebrata, Euteleostomi;
Mammalia, Eutheria, Lagomorpha, Leporidae; Oryctolagus.
   Serum albumin precursor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    271 HGDLLE 276

Its main function is the regulation of the colloidal osmotic pressure of blood.
-!-FUNCTION: NRP regulates fat digestion, lipid absorption, and blood flow (Potential).
-!- SUBCELLUIAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the ALB/APP/VDB family.
-!- SIMILARITY: Contains 3 albumin domains.

"Elicitor-specific induction of one member of the chitinase gene
family in Arachis hypogaea.";
Mol. Genet. 224.469-476(1990).
-!- CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-
acetyl-D-glucosamine polymers of chitin.
-!- INDUCTION: By yeast extract and dilution. Slight induction by
glucon elicitor.
-!- INDUCTION: By Least Extract and dilution. Slight induction by
glucon elicitor.
-!- SIMILARITY: BELONGS TO CHITINASE CLASS IA OR IB (BELONGS TO FAMILY
19 OF GLYCOSYL HYDROLASES).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
protein synthesis. Protects formylmethionyl-tRNA from spontaneous hydrolysis and promotes its binding to the 30s ribosomal subunits. Also involved in the hydrolysis of GTP during the formation of the 70s ribosomal complex (By similarity). SUBCELLULAR LOCATION: Cytoplasmic. SUBCELLULAR LOCATION: Cytoplasmic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDIJNE-39453479; PubNed-9308178;

                                                                                                                                                                                                                                                                                 -:- FUNCTION: Seems to be the binding site for several of the factors involved in protein synthesis and appears to be essential for accurate translation (By similarity).
-:- SIMILARITY: Belongs to the bi2P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-NOV-1997 (Rel. 35, Created)

"Gene organization in the ada-rpli region of Streptomyces virginiae.";
Gene 171:135-136(1996).

-1- FUNCTION: Seems to be the binding site for several of the factors
involved in protein synthesis and appears to be essential for
accurate translation (By similarity).

-1- SIMILARITY: Belongs to the L12P family of ribosomal proteins.
                            Rochu D., Porta F.; "Two alloalbumins with identical electrophoretic mobility are produced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

J. Allergy Clin. Immunol. 93:614-627(1994).
J. PUNCTION: Serum albumin, the anin protein of plasma, has a good binding capacity for water, Ca(2+), Na(+), K(+), fatty acids, hormones, bilirubin and drugs. Its main function is the regulation of the colloidal osmotic pressure of blood.

SUBCELLUIAR LOCATION: Secreted.

-IT TRSUE SPECIFICITY: Plasma.

-IT ALLERGEN: Causes an allergic reaction in human.

-I SIMILARITY: Belongs to the ALB/AFP/VDB family.
